

SO-KO Monochrome Ribbon For Primacy and Elypso – R4F027NAA

Ideal for the personalization of bank and payment cards!

SO-KO monochrome ribbon consists of a silver matt resin (S) panel and a black resin (K) panel which are both followed by a protective overlay (O) panel. This ribbon is dedicated for dual-sided printing.

The SO-KO ribbon is the perfect fit for banking applications where preprinted cards are personalized.

The silver matt panel offers top-notch printing quality of characters and graphics on the dark card front side, while the black panel makes it possible to print specific banking characters such as the CVV number on the signature panel at the card back. Both overlay varnish panels offer an additional protection of the printing for a better card durability.

The SO-KO ribbon has a capacity of personalizing 250 cards, in a decentralized setup, e.g., at the bank's branch level.

Combining the SO-KO ribbon and the Evolis card printer provides premium printing quality, and peace of mind for both the card issuer and the card holder.

Key benefits:

- Possibility to personalize cards with dark background
- Possibility to print the CVV number directly on the signature panel
- The overlay printing on the front and back of the card answers expectations of financial institutions

Target markets & applications:

- Banking
- Loyalty
- Membership

Printers:

- Primacy Duplex
- Elypso Duplex
